

On April 22nd at Sullivan Middle School, Purdue extension office asks you to join them for Wabash Valley Maker's Fest, a dynamic and free day of fun and education about Science, Technology, Engineering, Agriculture, and Mathematics innovations. This conference is for students 3rd grade through 8th grade, high school students thinking of a career in a STEAM field, educators and community members who are curious about how STEM innovations in the classroom can impact a community. Each educator who attends will be offered 6 professional growth points.

They are honored to be able to bring NASA Astronaut Dr. David Wolf to the 2017 "Wabash Valley Maker's Fest" to share not only his ideas on the importance of STEAM education, but also his experiences as an American astronaut, medical doctor, and electrical engineer.

Attendees can engage in exciting presentations by members of EdTech Heroes, Rose Hulman Institute of Technology, Purdue University, Indiana State School of Technology, Crane Naval Defense, and many more.

3-5th grade tickets are sold out and 6-8th grade tickets will be soon. But there are plenty of 9-12th grade, educator tickets, and community tickets still available. I ask that you please consider attending as an educator or community member and encourage your students and children to attend this opportunity that has been presented to our community.

To get your free ticket, visit [Eventbrite.com](https://www.eventbrite.com) and search Wabash Valley Makers Fest and click on the register button. You can also find them on Facebook. Just search Wabash Valley Makers Fest.
